

Your Brand is Ready!

A quick guide to your new logo files

Thank you for trusting Kael's Creative Studio with your brand identity. Inside your delivery folder, you will find a few different types of files. Here is a handy guide on what they are and how to use them to make your brand shine!

.SVG

THE MASTER VECTOR FILE

This is a vector file, meaning it will never lose quality or get blurry, no matter how huge you stretch it! **This is the exact file you should send to printing shops** for merchandise, signage, or apparel. Plus, you can upload this directly into Canva to easily change the colors of your logo!

.PNG

THE TRANSPARENT ONE

This is a high-resolution image with an invisible, transparent background. This is your go-to file for placing your logo flawlessly over photos, custom backgrounds, your website header, or using it as a watermark on your posts.

.JPG

THE STANDARD IMAGE

This is a high-quality image with a solid background (usually white or your brand's primary color). It is perfect for setting up your social media profile pictures, quick sharing with your team, or basic printing.

Time to show the world!

Please remember to download and save these files safely to your own device.

God bless to you and to your project! ~ Kael
